Professional Summary

Computer Science undergraduate focused on AI-powered applications, backend development, RAG systems, and cloud technologies. Skilled in building intelligent AI solutions using Python, FastAPI, LangChain, and machine learning workflows.

Education

B.E. Computer Science Engineering

2022 – 2026

Sambhram Institute of Technology, VTU

CGPA: 7/10

Skills

Languages: Python, Java, JavaScript, SQL, C

Frameworks Tools: FastAPI, React.js, LangChain, LangGraph, FAISS, Streamlit, MySQL, Git, REST APIs

Concepts: Machine Learning, RAG Applications, Blockchain, Cloud Computing, Network Anomaly Detection

Projects

Smart Document Analyzer

- Built a RAG-powered document analyzer with semantic retrieval across 100+ document chunks.
- Enabled real-time contextual querying from uploaded PDF documents.
- Implemented LangChain and FAISS-based retrieval workflows for improved response accuracy.
- Built an interactive Streamlit interface for AI-powered document analysis and response generation.

Multi-Agent AI Research Assistant

- Developed a multi-agent AI system for autonomous research, summarization, and response generation.
- Implemented LangGraph workflows with contextual retrieval and reasoning pipelines.
- Optimized multi-agent orchestration for efficient AI-driven task execution.
- Developed FastAPI-based backend workflows for agent communication and task execution.

AI-Based Network Anomaly Detection

- Developed an ML-based system for detecting abnormal network traffic and cyber threats.
- Implemented Isolation Forest algorithms for anomaly detection.
- Processed and analyzed 5,000+ network traffic records for model evaluation.

Blockchain-Based Product Authentication System

- Developed a blockchain-based verification system to prevent counterfeit products.
- Implemented QR-based validation and smart contract authentication.

Internship

AI Cloud Computing Intern — SuprMentr

Jan 2026 – May 2026

- Worked on AI-driven applications, RAG-based solutions, backend workflows, and deployment tasks.
- Assisted in API integration, cloud-based development, and AI pipeline implementation.
- Collaborated on scalable AI solutions using modern development tools and frameworks.

Relevant Coursework

Machine Learning — Cloud Computing — Blockchain Technology

Database Management Systems — Data Structures Algorithms

Certifications

NVIDIA Building RAG Agents — IBM Introduction to AI

Coursera Machine Learning with Python — Power BI Data Visualization
